## INTRODUCTION TO FRACTIONS

- **Language of learning:**

Math vocabulary: equivalent, equal.

Equivalents  
Equals

Grammar: there is/there are, present simple.

- **Language for learning:**

Making definitions: present simple.

1) Pronoun/noun + verb to be (am/is/are) + ...

Example:  $\frac{3}{4}$  is equivalent to  $\frac{6}{8}$

2) Pronoun/noun + verb + ...

Example: denominator tells us total number of parts in a whole.

Expressing fractions with words:

There is/there are + nominator (cardinal number) + denominator (ordinal number)

Examples:

$\frac{1}{2}$  = there is one half.

$\frac{2}{3}$  = there are two thirds.

$\frac{1}{4}$  = there is one fourth.

$\frac{3}{5}$  = there are three fifths.

Asking permission to ask a question:

Teacher, I have a question

Teacher, can I ask you a question?

Sharing opinion with others:

In my opinion...
