

2. Fill the gaps with the words given below:

*180 degrees, three, right, angles, obtuse, sides, equilateral.*

- The word 'triangle' means: "tri" means \_\_\_\_\_ and "angles" means \_\_\_\_\_ .
- There's two different way to classify (or organize) triangles: by their \_\_\_\_\_ and by their angles.
- There's 3 types of angles: there's right angles, acute angles, and \_\_\_\_\_ angles.
- The one made from the right angle is called a \_\_\_\_\_ triangle.
- If all three sides of a triangle are exactly the same length, then we call it an \_\_\_\_\_ triangle.
- A triangle's angles will always add up to \_\_\_\_\_.
